SUMMARY

Software engineer who designs and ships web and mobile products end to end, from the interface to the database. Full-stack engineer at FleetZero, and a freelance developer behind a mobile point of sale, shop management software, a VoIP calling app, an App Store app and business websites for clients in Malaysia, Canada, Pakistan and the United States. Comfortable owning a product on my own or working inside a team.

EXPERIENCE

Software Engineer · FleetZero

Apr 2026 – Present

Full-time · Canada (remote)

- Designed and built **fleetzero.ai** and its Supabase-backed admin, so the team publishes services, insights, events, press releases and SEO settings without a developer.
- Built **garagezero.ai**, FleetZero's marketplace for EV fleet maintenance tools: SKU catalogue with variants and specs, a fleet quote flow and a guided equipment builder.
- Contribute to the company's internal Angular platform for fleet operations, shipping through Azure DevOps pull requests and pipelines.

Web & Mobile App Developer · Freelance

Jul 2025 – Present

Self-employed · Remote

- Qwuik**: a mobile point of sale in React Native (Expo) that turns a phone into a checkout with camera barcode scanning and tap to pay, plus a Next.js and Appwrite admin portal for stores, catalogue, F&B ordering, loyalty, payments and e-invoicing.
- NA Tire & Lube (Toronto)**: replaced the shop's legacy COSTAR system with Next.js and Supabase software for quotes, repair orders, invoices, inventory, purchasing and reports, with role-based access enforced in Postgres. Also built the shop's website.
- Telcan Inc.:** GupShup, a VoIP calling app with a prepaid wallet, top-ups and live per-country rates.
- Websites for ALL OUT Studio, Elite Property Exchange, Grow With Sadeed and Rohingya Rights Response; staff, payroll and task systems for Kemas Unisex (a five-branch salon chain) and Kopit.

iOS App Developer · Word Of Mouth Foodie

Mar 2025 – Present

Contract · United States (remote)

- Built and shipped the App Store app on my own: a social food feed, location-based discovery on a map and wishlists, with React Native, Supabase and Clerk.
- Built the admin portal the team uses to manage users, moderate reviews and track engagement.

Web App Developer · Raion Technologies

Aug 2024 – Jan 2025

Internship · Malaysia (remote)

- Built Raion Hub, a Next.js and TypeScript data dashboard with drag-and-drop grid tables, mobile card layouts, CSV and Excel import and export, lead management and multiple workspaces.

Earlier: Web Developer for Empower Learning System (volunteer, 2025) and Refugee Action for Change (contract, 2024); Teacher Assistant for Google Workspace at Fugee (2024).

PERSONAL PROJECTS

DWM Downloader & Compressor

Web tools to download video from any link and compress PDFs, images and video in the browser.

Copied & SpotMac

macOS apps in Swift: a clipboard history manager and a cursor spotlight for presentations.
